

METHOD AND APPARATUS FOR RECOVERING A CALL
RESOURCE FROM A CALL SESSION

ABSTRACT OF THE DISCLOSURE

5 A method and apparatus for recovering a call
resource from a call session are disclosed. A call
resource detects if a media stream communicated from a
device via a communication network becomes inactive
during the call session and deletes the inactive media
stream. The call resource deletes the inactive media
streams until one media stream remains in the call
session, which is terminated to release the call resource
10 from the call session.
